Analyze · Investigate · Monitor

Get to know Splunk – *The Data-to-Everything Platform™*

Splunk is a powerful tool that's designed to help organizations investigate, monitor, analyze, and act on data at any scale.

With Splunk, you can unify all of your data on a single platform to:

Make data more accessible
Access and search data from any source, across any device
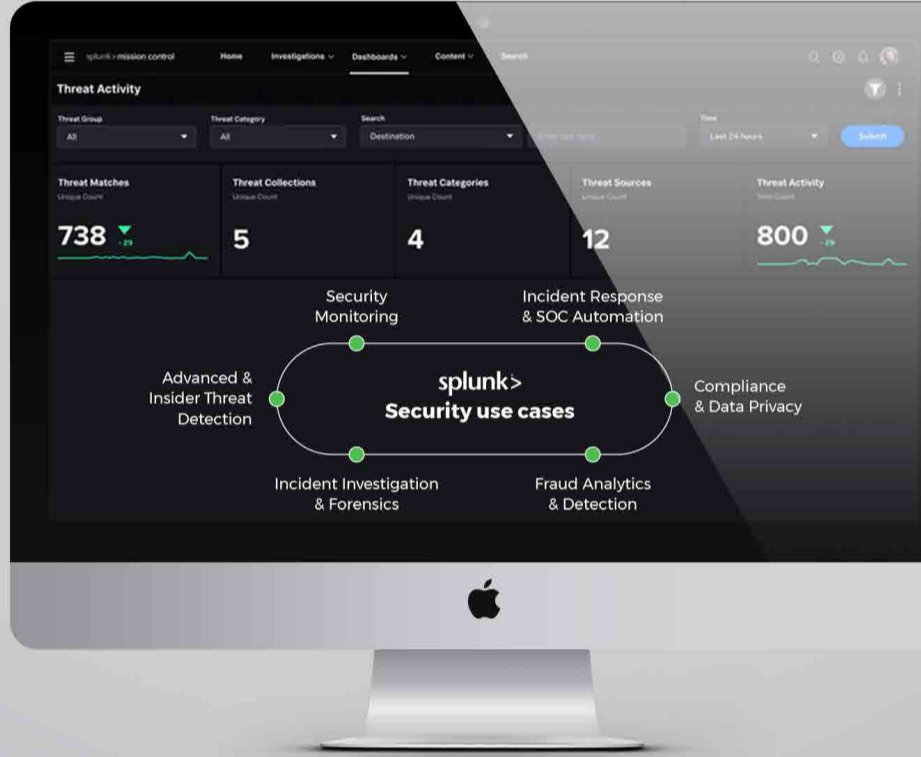

Make data more usable
Ask questions in a simple language, visualize data, and plan alerts

Make data more valuable
Share data-driven insights with your people and infrastructure

---

Many of Splunk's most impactful use cases are within security

And at Kudelski Security, we'll help you map those use cases to your IT and security teams' needs – as well as provide expert-level support from deployment through maintenance to ensure Splunk can continually deliver your intended outcomes.

Threat Activity

738 5 4 12 800

splunk> Security use cases

Security Monitoring · Incident Response & SOC Automation · Compliance & Data Privacy · Fraud Analytics & Detection · Incident Investigation & Forensics · Advanced & Insider Threat Detection

---

No matter where you are in your security journey, Splunk can help you:

Strengthen your security operations
With event sequencing, alert management, risk scores, and customizable dashboards

Incorporate risk-based alerting
Conquer alert fatigue and shorten queues with high fidelity, risk-based alerting

Streamline threat investigations
Gather all the context you need in one view for rapid investigations and response

Free-up your teams with automation
Use Splunk's frameworks and integrations to automate traditionally manual tasks

---

We're one of Splunk's most capable partners

Even if you're already using Splunk, we'll work with you to combine their platform with our suite of security services to build a world-class cybersecurity program from the ground-up, or significantly improve the one you already have in place.

Complete Splunk lifecycle services
✓ Fully or co-managed Splunk deployments
✓ Upgrades, maintenance, and 24/7/365 support
✓ Custom scripting, dashboards, and visualizations
✓ Data onboarding and migration

+

State-of-the-art security services
✓ Managed detection and response (MDR)
✓ Incident response retainer services
✓ Security device management and support
✓ Advisory and assessment services
