CYBER FUSION CENTER
## Managed Security Services

KUDELSKI SECURITY

Improve your threat detection and response capabilities with contextual threat intelligence and predictive security.

Cyber threats and attacker capabilities are rapidly outpacing traditional threat detection technologies. The average breach goes undetected for 146 days, and most organizations do not discover breaches on their own. In order to properly protect and defend their networks, organizations need threat intelligence that combines literal and technical information into a comprehensive, relevant, and contextualized offering.

The Kudelski Security Cyber Fusion Center (CFC) operates 24x7x365 and is staffed by a team of expert threat and intelligence analysts. The CFC fuses contextualized threat intelligence with the analysis of security-relevant data collected from your organization, enabling rapid threat detection and incident response.

The Cyber Fusion Center

KUDELSKI SECURITY CHAIN DEFENSE MODEL

Attack Kill Chain

Attacker Methodology

Threat Monitoring & Hunting

Pre-Breach
Reconnaissance → Design & Build → Delivery

Breach
Exploitation → Installation

Post-Breach
Command & Control → Actions & Objectives

1. Protect and Detect	⟶	2. Respond	⟶	3. Predict

Contextualized threat intelligence and monitoring leverages market-leading and purpose-built technology to provide true and pervasive visibility into the relevant threats that can harm your organization.

Pervasive visibility enables our expert analysts to discover attacks and identify suspicious patterns that evade conventional security technologies, particularly at the endpoint – the weakest link in most organizations' defenses. This quick and accurate detection allows us to help your security team respond and mitigate more effectively.
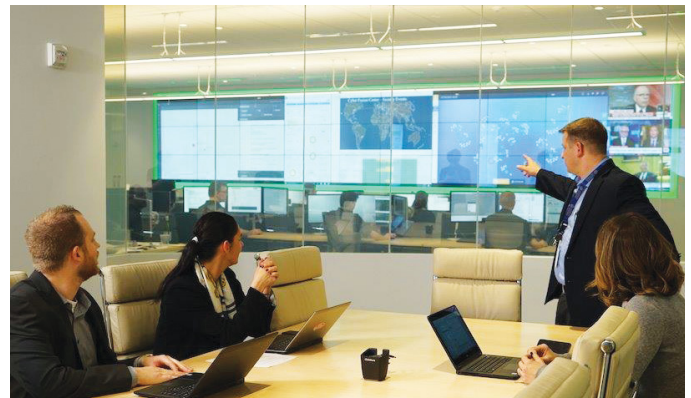

The CFC's threat correlation and analytics engine generates alarms that are reviewed, analyzed, and confirmed by threat analysts and then automatically reinjected into the CFC's analytics engines. Threat hunting and retrospection on historical data allows us to predict future adversary activity, detecting attacks earlier than other MSSPs.

The Cyber Fusion Center Advantage

The Cyber Fusion Center (CFC) leverages deep security engineering expertise, proven analytic methodologies, purpose-built tools, and innovative technologies to extend the capabilities of our clients' security teams.

- 24x7x365 toll-free hotline providing direct contact to your expert cybersecurity team

- Global reach with operations in Switzerland and across the United States

- Intuitive, easy-to-use client portal with real-time service updates, access to reports, and the ability to securely communicate with the CFC

- Monthly service reporting and a dedicated Client Success Manager

- Expert team that holds numerous professional certifications

- Partnerships with leading security technology, endpoint protection, and response vendors
