CYBER FUSION CENTER
Managed Security Services

KUDELSKI SECURITY

Improve your threat detection and response capabilities with contextual threat intelligence and predictive security.

Cyber threats and attacker capabilities are rapidly outpacing traditional threat detection technologies. The average breach goes undetected for months, and most organizations do not discover breaches on their own. In order to properly protect and defend their environments, security leaders need to overcome the combined challenge of attack surface expansion, threat sophistication, visibility, alert fatigue, and talent gap.
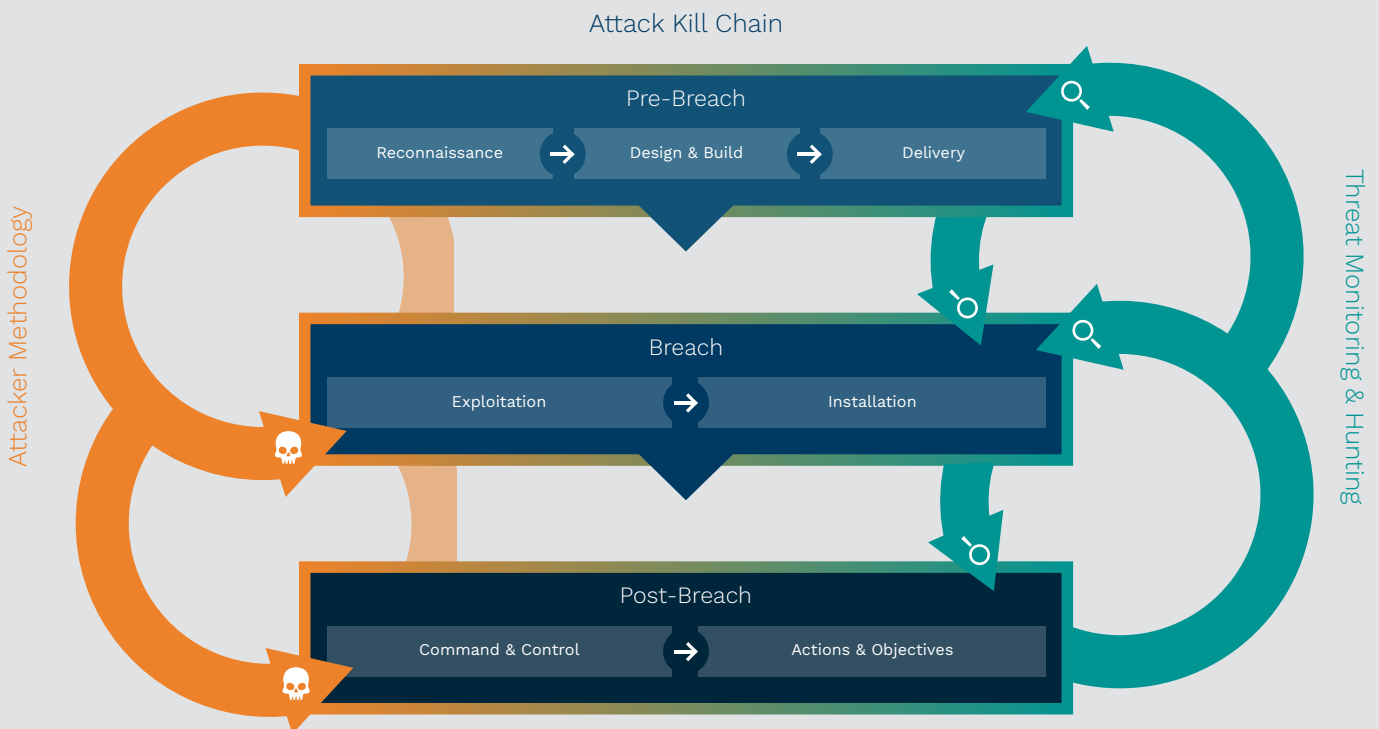

The Kudelski Security Cyber Fusion Center (CFC) is a next-generation SOC which operates 24x7 and is staffed by a team of security experts, threat hunters as well as incident responders.

The CFC gather security data from across your ecosystem (traditional IT, cloud, hybrid, OT/ICS), and automatically fuses it with threat intelligence to generate a rich, contextualized view of the threats that matter most.

Powered by the CFC, our Managed Detection & Response (MDR) services provide 24x7 threat detection, hunting, and remediation to protect your data wherever it resides. We can reduce threat detection time from days to minutes and drastically minimize the impact of a breach, at a fraction of the cost of in-house support.

The Cyber Fusion Center

KUDELSKI SECURITY CHAIN DEFENSE MODEL

Attack Kill Chain

Attacker Methodology

Threat Monitoring & Hunting

Pre-Breach
Reconnaissance → Design & Build → Delivery

Breach
Exploitation → Installation

Post-Breach
Command & Control → Actions & Objectives

| 1. Protect and Detect	2. Respond	3. Predict
Contextualized threat intelligence and monitoring leverages market-leading and purpose-built technology to provide true and pervasive visibility into the relevant threats that can harm your organization.	Pervasive visibility enables our expert analysts to discover attacks and identify suspicious patterns that evade conventional security technologies, particularly at the endpoint – the weakest link in most organizations' defenses. This quick and accurate detection allows us to help your security team respond and mitigate more effectively.	The CFC's threat correlation and analytics engine generates alarms that are reviewed, analyzed, and confirmed by threat analysts and then automatically reinjected into the CFC's analytics engines. Threat hunting and retrospection on historical data allows us to predict future adversary activity, detecting attacks earlier than legacy MSSPs.

The Cyber Fusion Center Advantage

The Cyber Fusion Center (CFC) leverages deep security engineering expertise, proven analytic methodologies, purpose-built tools, to extend the capabilities of our clients' security teams. Its MDR service can reduce threat detection time from the average of 56 to hours, or minutes even.
- 24x7x365 toll-free hotline providing direct contact to your expert cybersecurity team

- Global reach with operations in Switzerland and across the United States

- The Client Fusion Portal gives a single-view visibility on the threat information, dashboards and KPIs that matter most and offers 24x7 access to analysts as well as straightforward guidance on remediation

- Monthly service reporting and a dedicated client success manager

- Expert team that holds numerous professional certifications

- Strong mix of proprietary solutions and leading security technology, such as endpoint detection & response (EDR), attacker deception, OT/ICS continuous threat detection

- Over 10 market analyst recognitions and awards from Gartner, Forrester, IDC, Frost & Sullivan, CRN and others
