Build a world-class cybersecurity program with Kudelski Security and Splunk

Together with Splunk, we can help you take advantage of the growing amount of data your organization produces, map emerging threats to your security needs, strengthen your security operations, improve your security posture, and much more.

Get to know Splunk – The Data-to-Everything Platform™

Splunk is a powerful tool that's designed to help organizations investigate, monitor, analyze, and act on data at any scale.

With Splunk, you can unify all of your data on a single platform to:

- Monitor data from any source, across any device
- Investigate data from any source, across any device
- Analyze data from any source, across any device
- Act on insights from data

Many of Splunk’s most impactful use cases are within security

And at Kudelski Security, we’ll help you get the most from Splunk. We’ve been providing cybersecurity services and solutions for nearly 50 years, as well as security consulting services, to defend against threats that every organization faces. With Splunk, we can help you bring more intelligence to your security team, strengthen your security operations, improve your security posture, and much more.

We’re one of Splunk’s most capable partners

Even if you’re already using Splunk, we’ll work with you to combine their platform with our suite of security services to build a world-class cybersecurity program from the ground-up, or significantly improve the one you already have in place.

We're one of Splunk's most capable partners
